Shengjiu Introduction

Shengjiu Cabinets Lock Co., Ltd is a comprehensive cabinet locks and hardware manufacturing enterprise integrating R&D, industry and trading. It was established in 1984.

Shengjiu has cultivated a professional and dedicated R&D team. We dedicate in developing three main principle products, such as cabinet locks, hinges and handles. We design products base on daring ideas and acquire the up-to-date information locally and abroad keenly. The company possesses more than 40 products of its own producing and selling right.

The company has a complete system in tracing, monitoring and inspecting starting from R&D, molding making, die-casting, punching, surface treatment and assembling.

After 20 years development, Shengjiu has already established its own quality systems and products standards. The company established the management standard after advanced equipment of mold and testing center was set up. We get ISO9001:2000 in 2001. At the same time we were beginning to pay more attention to environmental protection and got ISO14001:2004 in 2006.

Shengjiu regards quality as lifeline. We always concentrate on "Service first, quality first" to get more benefit for customer. We also provides different solutions to satisfy the customer's requirement. Meanwhile, We improves the company's internal competition, and provides the outstanding products to customer on time. Eventually achieve a win-win target.

Testing center

The testing center of Shengjiu was established in December 2006. It was divided into three sections: weather resisting test, mechanical property test and physically & chemically analytical test. According to the requirement of JB/T10382-2002 "the General Qualification for Mechanical Locks of Electrical Equipments" and the Shengjiu's standard for products quality, a full set of testing equipment was designed and set up. Counting or science, fair and accurate as its aim of work, Shengjiu gives a guarantee to the quality of its products and also lengthens its products' service life.

The tests include:

1. Weather resisting test

Salt spray, ultraviolet light resisting test, dustproof test temperature and moisture/heat alternating test

2. Mechanical property test and equipments

Tensile test: for examining the tensile strength of the products and materials.

Impact load test: for examining the impact strength of the products and materials.

Image measuring instrument: for drawing products precisely and for analyzing the materials' whole image.

Intelligent electrochemical thickness gauge, hardness gauge, instrument for testing spring's pulling and pressing force, torsion stress testing instrument, vibration testing instrument, instrument for life test.

3. Physically & chemically analytical tests

Atomic absorption spectrophotometer: for analyzing components of materials; for measuring content of hazardous metal according to RoHS application.

Ultraviolet-visible spectrophotometer: for measuring content of hexavalent chromium.

Testing center equipment introduction

➤ Salt spray tester

Application: Test corrosion resistance of the protecting coating on product's surface

➤ Image measurement instrument

Application: Measure high precision, irregularly shaped product and draw the outline. Such as angle, radian, radius and hologram generates CAD and so on

➤ Ultraviolet light and climate resistance adjustable testing box

Application: Test the influence to the color of product's surface and mechanical property under harsh ultraviolet radiation or at temperature 50°C to 70°C

➤ Dust test chamber

Application: Test the influence to product's mechanical property in harsh sand and dust environment. Confirm whether the sand or dust will get into the inside of cabinets through cabinet locks. Survey the IP degree of cabinet locks

➤ High-low temperature-humidity test chamber

Application: Test the influence to product's mechanical and physical property in environment of different temperature and humidities

➤ Impact testing machine

Application: Test the impact resistance of different materials

➤ Pressure tester

Application: Test high pressure performance of electronic products. The main purpose of the pressure test, test circuit and housing leakage current value, and to check the ability of insulation withstand voltage.

➤ Electrical parameters measuring instrument

Application: Test electronic products, voltage, current, power factor.

➤ X Fluorescent direct reading spectrometer

Application: Test the percentage content of each element in the test sample or the ROHS test

➤ Lock insertion and removal rotation testing machine

Application: Test the usage counter of cylinder in the key plug, pull, turn bolt driven. Test machine shows the key inserted, pull force, torque value of rotation.

➤ Universal electronic spring pull and press tester

Application: 1. Test the physical property of different materials, such as the tensile strength, the yield stress and the point of elastic deformation
2. Test the bearing capacity of the cam, the magnitude of tensile resistance and the stress of the whole cabinet lock. Test the product's bearable load according to the testing graph
3. Test the magnitude of hinge's widthways and lengthways bearing capacity. Test the product's bearable load according to the testing graph

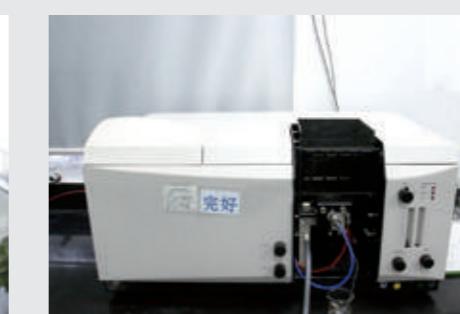

➤ Vickers hardness tester

Application: Measure the hardness of product after the heat treatment or the hardness of some big products with great hardness. All the products tested by electric hardness tester can also be tested by vickers microhardness tester. Electric hardness tester measures more fast. Vickers microhardness tester measures slowly and complexly

➤ High speed carbon-sulfur analyzer

Application: Test the percentage of carbon and sulfur in different materials

➤ Atomic absorption spectrophotometer

Application: Test the percentage of Ni, Pb, Cu, Zn, Fe, Al, Hg, Mn, Li, Mo and so on in different materials

➤ Waterproof test

Application: Test product waterproof level. Test product features in the water environment whether can normal operation. Test whether in-outside of product is sealed and impermeable

Design&Mould

Shengjiu focuses on every detail and humanization design of its' products. We try to attain the most simple operation method with the most reasonable structure on the premise of our products' quality.

Moulding tool, as the most important link of carrying out an idea into reality, is the key for guarantee factor to the product quality. Our CNC processing center, CNC engraving machine, electric impulse machine and experienced would designer, make the whole process to be more efficient and reliable.

CONCEPT OF NANOMETER SPRAY PAINTING

Nanotechnology is one of development from science-and-technology in the area of physics. Nanometer spray painting is which nanotechnology is used in manufacture. It forms compact nanometer painting on the surface of products which include exceptional hardness and high corrosion resistance materials. It can provide many kinds of colors and luster. This is one of the surface treatment which is environment friendly, lower cost, and durable. Nanometer spray painting is not eroded itself to protect the inside metal, the material can be eroded if the surface coating is destroyed, but it's excellent physical capability could replace electroplating treatment in a certain extent.

1	Highest temperature	150°C–180°C
2	Lowest temperature	-40°C
3	Hardness	GB/T6739-96 CHUNG HWA pencil 5-6H
4	Impact	GB/T1732-93 no rift, no fall-off (50kg.cm)
5	Resistance to Boid	Keep normal under 100°C water for 1 hour
6	Resistance to Acid	Keep normal under 5% HCl for 200 hours
7	Resistance to Alkali	Keep normal under 5% NaOH for 200 hours
8	Salt corrosive-resistance	GB/T1025-1997 under 5% NaCl 500hours in PH=7
9	RoHS compliance	Accordance with RoHS application
10	Color-resistance	Keep the normal color under drying in 180°C for 1 hour
11	Weather-resistance	GB/T4522-93 E<2 (ASTMG-53) QUV200 hours
12	Bend	GB11185-89 3MM Keep normal
13	Thickness	GB1764-79 40–60um

Vacuum Chrome Plated Nickel Plating Technology

Industrial manufacturing has brought severe damage to earth's ecosystem, and human living environment becomes worse and worse, so providing a better living environment is responsibility and obligation of every enterprise. Shengjiu is devoting to research environmental products and processes. Lasted five years Shengjiu research and explore the Vacuum Chrome-plating environmental finish process, and come true non-polluting &environmental processing, and processing parts in accordance with the standard of EU environmental protection.

Vacuum coating technology is the use of physical and chemical method, solid surface is coated with a layer of special performance, so that the solid surface with wear-resistant, high temperature resistance, corrosion resistance superior performance, antioxidation, anti radiation, conductive, magnetic, insulation and decoration and many other than solid material itself, to improve product quality, extend product life, save energy and achieve significant technical and economic benefit. Working principle: under the condition of vacuum, the metal, alloy or compound (evaporation or sputtering deposition), the cooling in the painted object film-forming process; vacuum coating is a new coating technology, coating preparation process is carried out under vacuum conditions, it with the existing liquid penetration the resulting coating has the following characteristics:

Preparation of thin film, the vacuum environment clean, film is not easy to be contaminated, can obtain good compactness, high purity, uniform coating film.

The film material and substrate material has a wide range of selectivity, thickness of the film can be controlled to produce various functional chrome film.

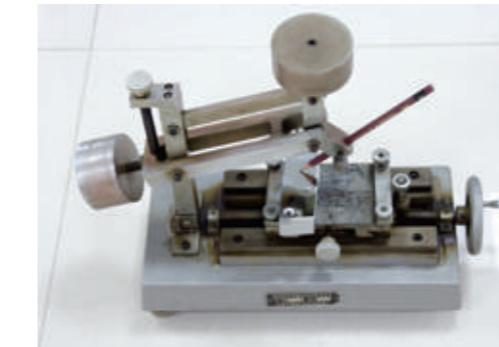

The film and substrate adhesion strength is good, the film is firm.

It does not produce waste, can avoid the pollution of the environment.

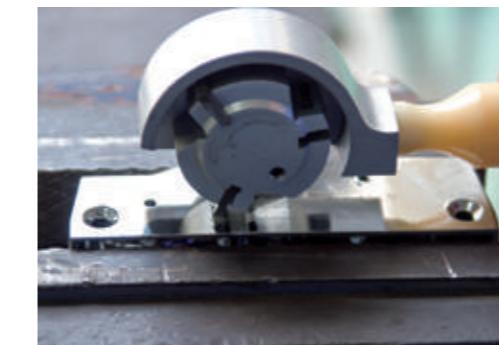

The coating structure is generally divided into: vacuum coating material, vacuum coating, primer, topcoat.

» Processing equipment showing

» Hardness test

» Adhesion test

Vacuum Chrome Plated Nickel Plating Technology

Compared to common plating, vacuum plating can meet the all general performance of common electroplating, its special character more suitable for all kinds of harsh environment, and the coating in line with the EU ROHS related law Requirements. The following is a vacuum chrome of the performance indicators:

Test Items	Technical data	
	Vacuum Chrome Plating	Usual plating
Impact strength	GB/T1793-1993 50kg·cm The surface is OK	/
Boling water resistance	120°C 1hour	/
Hardness	According GB/T6739-2006 more than 2H	/
Adhesive	GB/T 5270-2005 no obscission	GB/T 5270-2005 no obscission
Thickness	40-60um	8-12um
Corrosion resistance	GB/T10125-1997 more than 96H NSS	GB/T10125-1997 more than 48H NSS
Environmental protection	No waste water, so won't produce the products with environmental safety risk	Produce too much heavy metal waste water, not RoHS, so the products also have risk for environmental.

Product picture effect comparison (the appearance effect without any difference)

Vacuum chrome plated

Common electroplated

A STRONG SALES NETWORK

With the continued business expansion, Shengjiu has **7** companies which located in city of Beijing, Shanghai, Shenzhen, Wuhan, Qingdao, Ningbo and UAE. It's excellent quality high reputation, prompt service have won trust and favorable comments from a number of clients, and thus build up a reliable brand of Shengjiu(SJ). We own **26** distributors in domestic and **9** distributors in singapore, Japan, Korea, India, Sweden, Germany, Spain, South Africa, and Italy. That make Shengjiu a strong sales network to service for our valuable clients.

► Explanation of LH and RH version

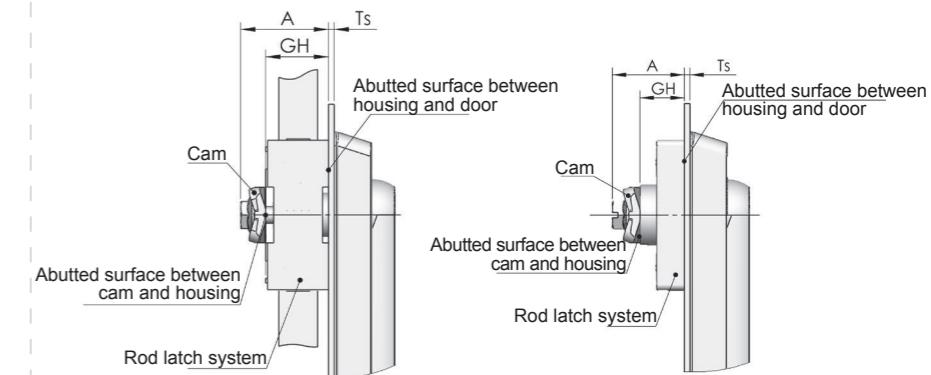

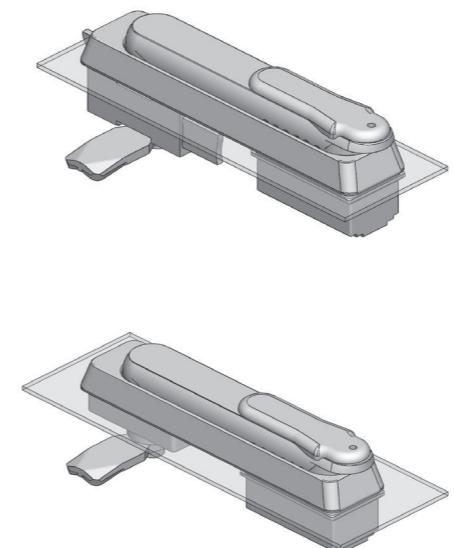

► Abbreviation

Lock: MS	Nut: NT	Right-hand:RH
Toggle: DK	Vibration proof screw: SW	Anticlockwise rotation: ACW
Handle: LS	key: K	Clockwise rotation: CW
Door stop: TX	Gasket: G	Stroke: Dm
Hinge: CL	Pin: P	Rotation angle: Ra
Rod: LG	Latch: MB	Powder coated finish: CS
Rod accessories: RG	Thickness: Ts	Plated finish: CP
Handle pull: HP	Adjustable distance: Ha	Max-Torque: Tmax
Waterproof cap: WP	Stop height: H	Max-load: Fmax
Dustproof cap: DP	Groundwork height: GH	Cold rolled steel: CRS
Profile Insert: TC	Bend height: BH	Spring steel: Fst
Cam: S	Left-hand: LH	Stainless steel: SUS

► H and GH specification

GH: the distance A from the abutted surface between lock body and door to the abutted surface between cam and lock body changes when Ts changes.

GH: the distance A from abutted surface between housing and door to the abutted surface between cam and housing is invariable when Ts changes. GH is measured from inboard door. The product is separable structure in common case. H=GH+BH

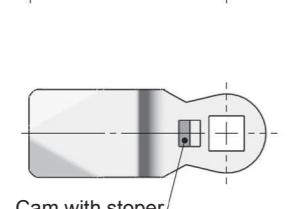

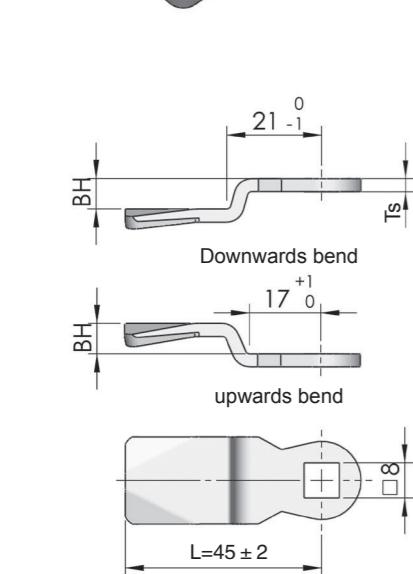

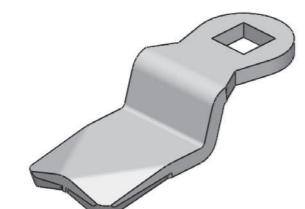

► IP-rating

The IP protection category is characterised by two numerals for protection against contact, foreign objects and water. As defined in IEC60529, the description is following:

1st numeral	Description	2nd numeral	Description
0	Non-protected	0	Non-protected
1	Protected against solid foreign objects with a diameter of 50mm and greater (such as hand)	1	Protected vertically falling water drops (such as condensation water)
2	Protected against solid foreign objects with a diameter of 12.5mm and greater (such as fingers)	2	Protected vertically falling water drops when the enclosure is tilted up to 15°
3	Protected against solid foreign objects with a diameter of 2.5mm and greater (such as tools or thick wires)	3	Protected against splashing water
4	Protected against solid foreign objects with a diameter of 1mm and greater (such as most wires or screws)	4	Protected against splashing water
5	Dust-protected	5	Protected against water jets
6	Dust-tight	6	Protected against powerful water jets
		7	Protected against the effects of temporary immersion in water
		8	Protected against the effects of continuous immersion in water

Example of rod-latch application

Calculate the length of the rod

Calculation method of coincident length of door center and center line of rotation part

$$L1=F/2-A+(Dm-2)$$

$$L2=F/2-B+(Dm-2)$$

Calculation method of coincident length of door center and center line of lock

$$L1=F/2-[A+(D/2-C)]+(Dm-2)$$

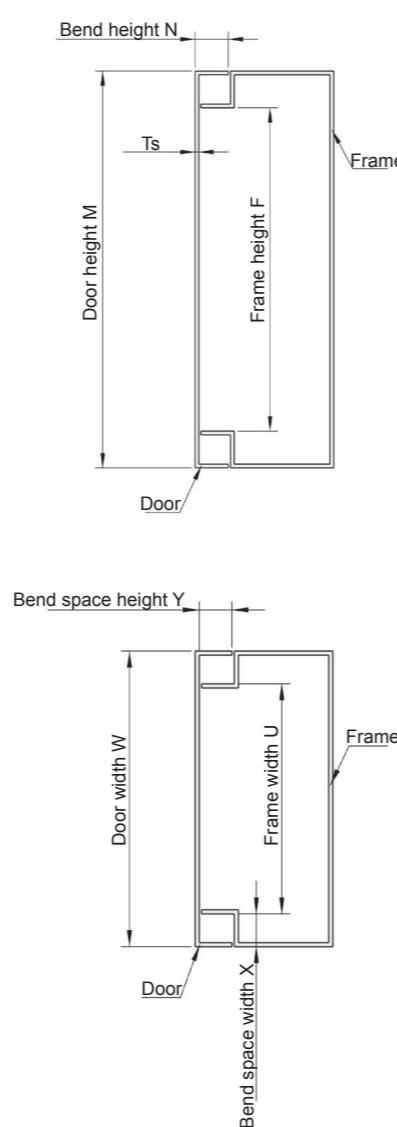

$$L2=F/2-[B-(D/2-C)]+(Dm-2)$$

Remark: the effective length of connecting piece should be deducted if a connecting piece is needed for fitting. This calculation method is applicable for those rods with seals fitted inside. Be aware of the actual installation conditions when using the above methods.

ELECTRONIC LOCK SERIES

Active electronic lock series

Cylinder lock

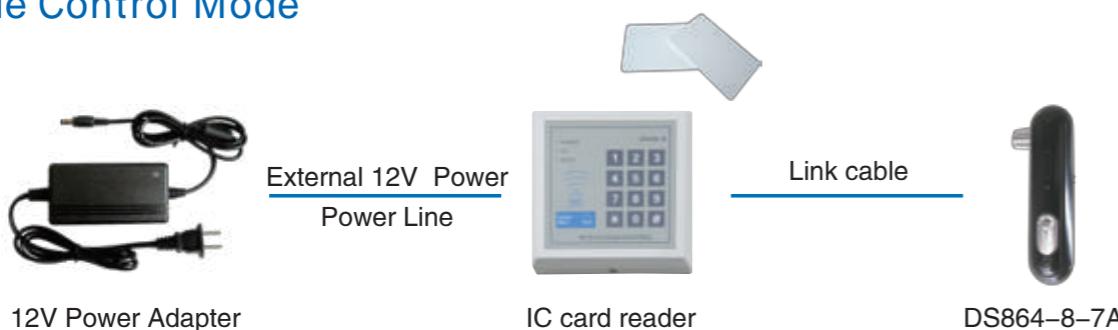

Passive electronic lock series(New product)

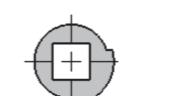

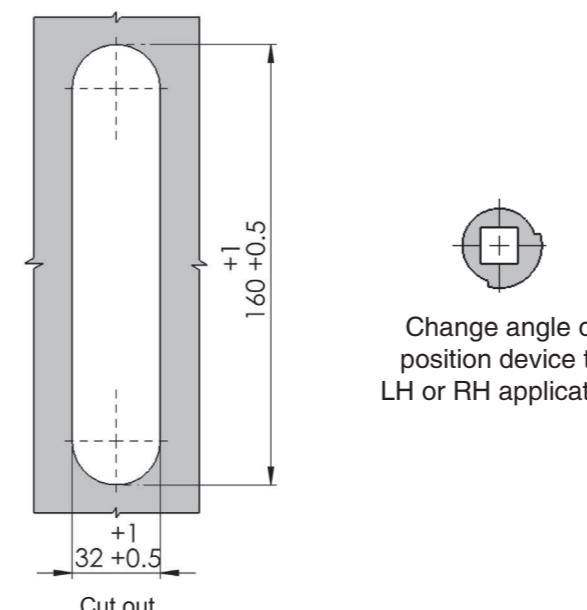

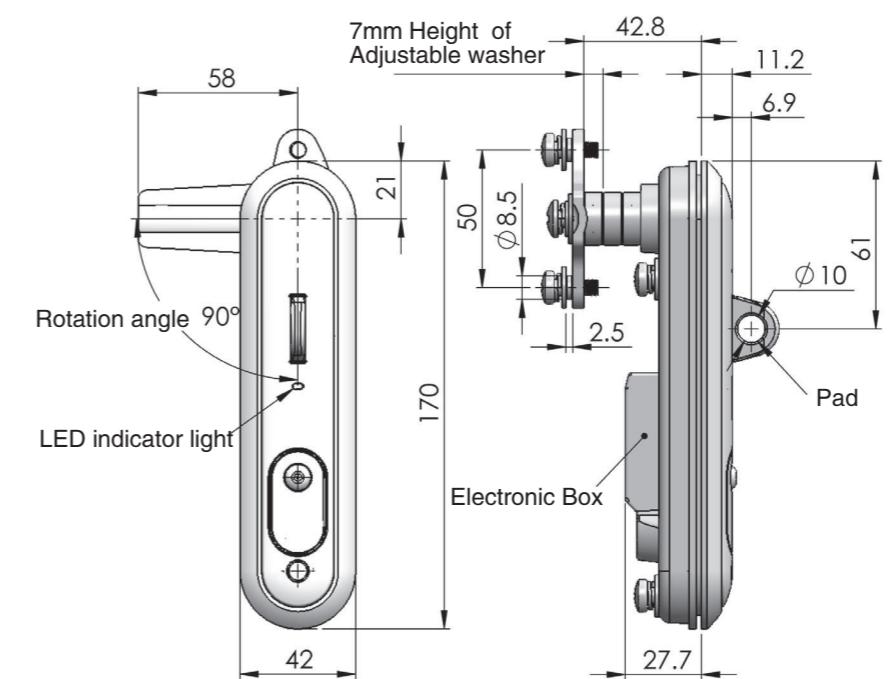

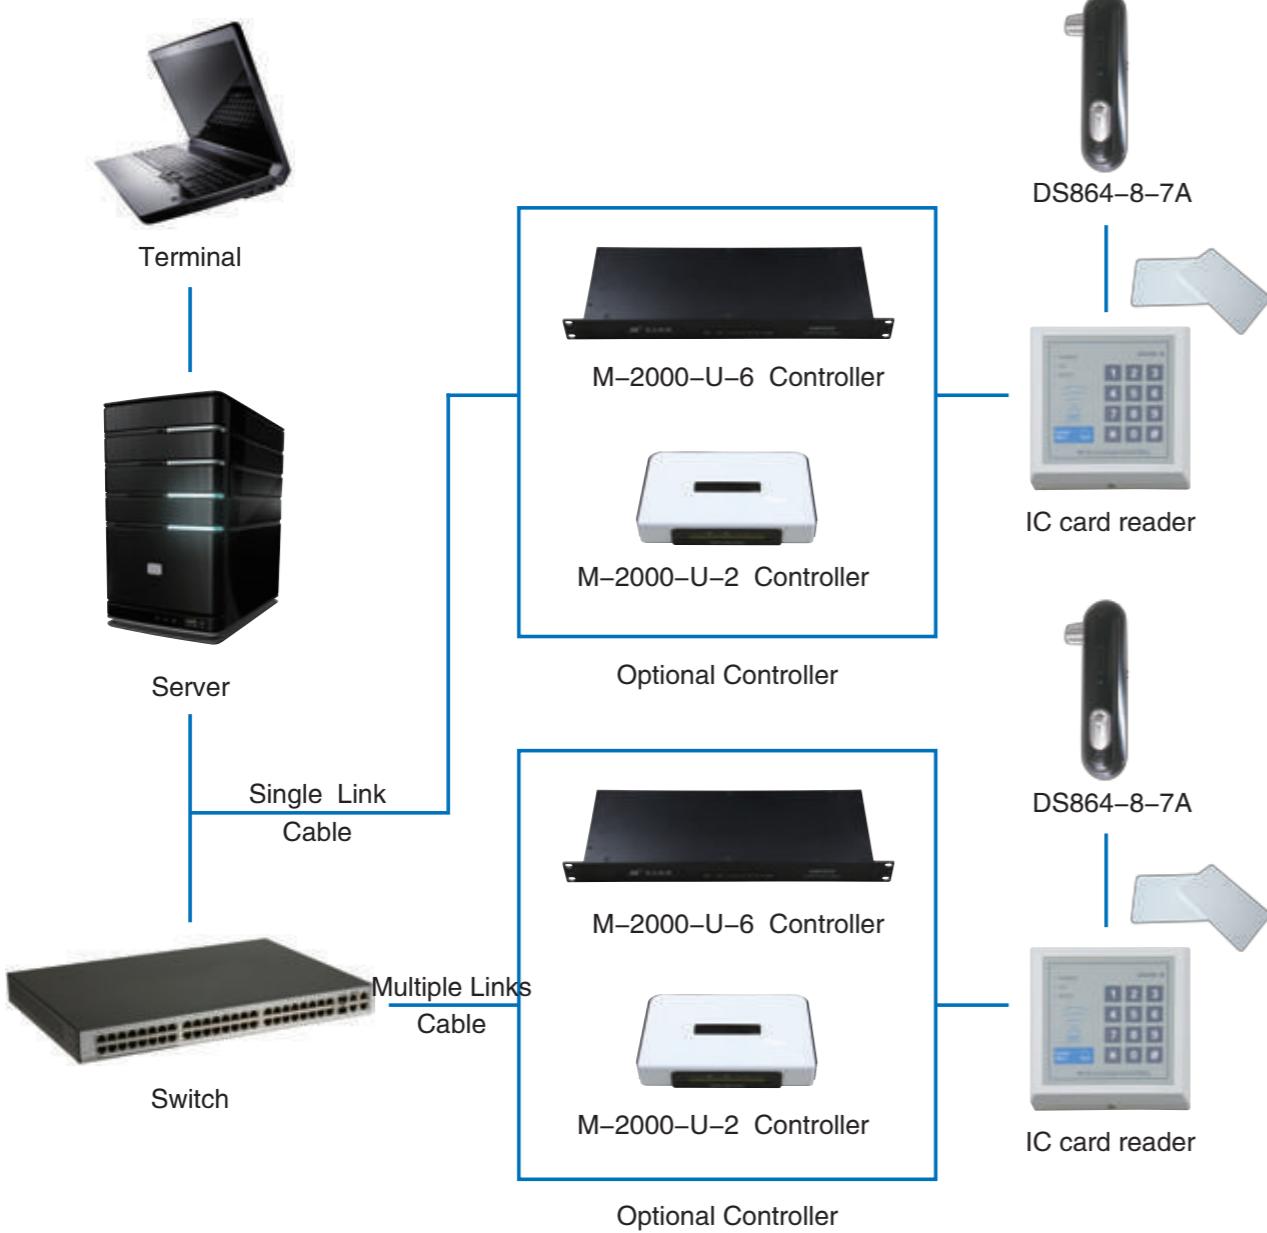

These locks above can be chosen to use electronic lock cylinder, the installation hole size refer to the mechanical lock, please consult the technical department before ordering.

DS864-8-7A Control System Principle

Single Control Mode

Network Control Mode

Change angle of position device to LH or RH application

DS864-8-7A

RL IP65 RoHS

Main material and finish : Black painted (high salt mist resistant) ZDC housing, handle, stainless steel cam.

Application : Active electronic lock.

Rated voltage: DC 12V

Rated current: ≤0.3A

Consumption Power: ≤3.6W

Remarks : Optional mechanical insert and electronic insert

This product is used for indoor.

Please read operating introduction in advance, and operate according to introduction.

Performance Parameter

Handle load tension capability: ≤600N

Handle load torque capability: ≤300N.m

Working Environment

Temperature: -40 ~ +65°C

Humidity: 5 ~ 90%

Altitude: -60m~4000m

MS842

Handle lock Electronic lock Accessories

Main material and finish : Black pocked coated ZDC handle and housing, white zinc-plated steel cam, stainless steel lock panel or whole stainless steel for selection

Application : Quarter-turn opening or closing, padlockable

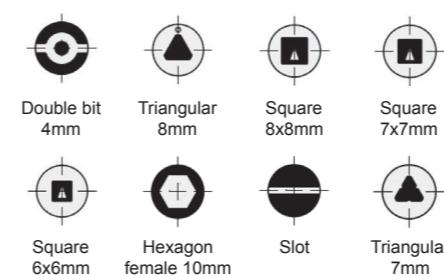

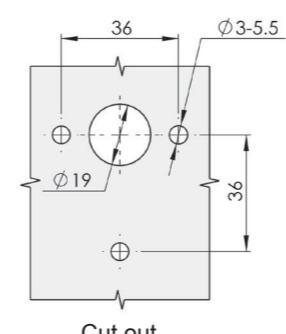

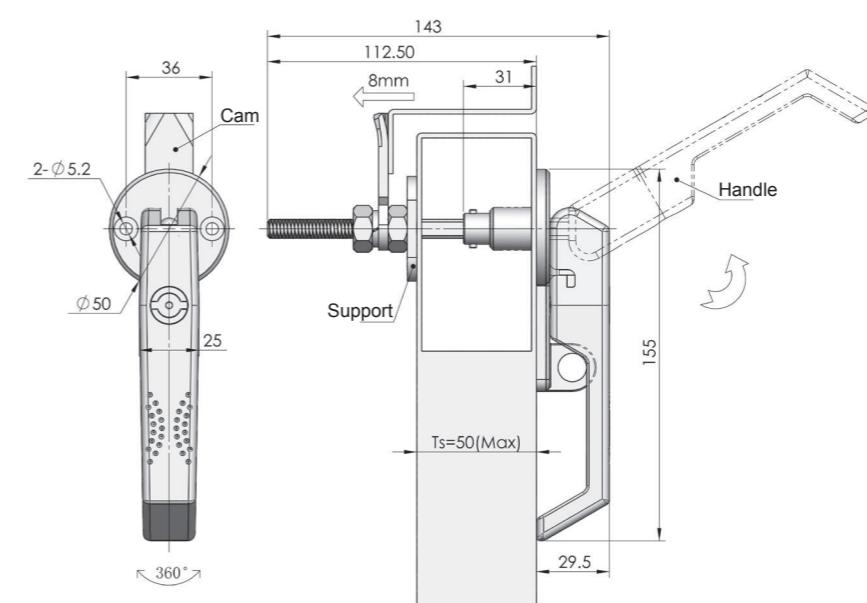

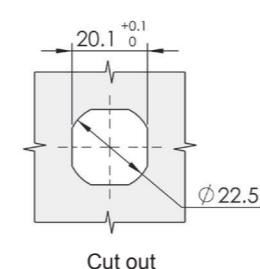

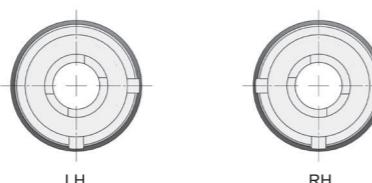

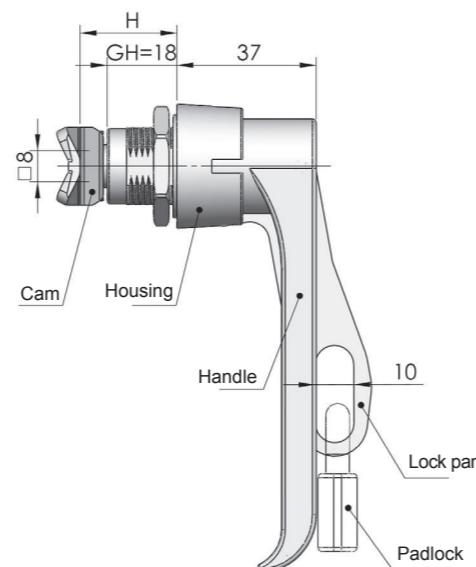

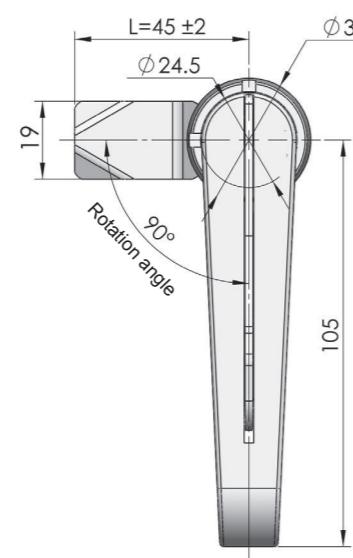

Default cam : S1B45Y07002
S1B45Y07022

Performance parameter:

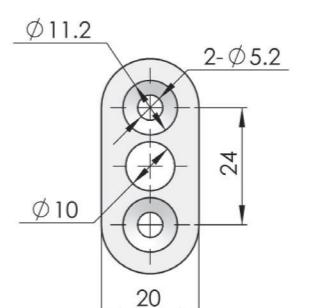

Maximum static load: 270N

Recommended nut tightening torque: 20N.m

Maximum input torque: 25N.m

Summary listing of instrumental lock insert for MS816-1/MS816-1A/MS817Series

Assembling sketch

Exploded view

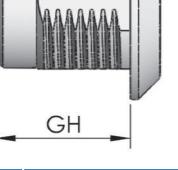

The image displays six door lock components arranged in two rows of three. The top row shows the polished version of the MS705 lock, featuring a silver-colored hexagonal head with a circular logo, a cylindrical body, and a long, thin, flat metal base plate. The bottom row shows the same components in a blacked version, where the heads and bodies are black with a matching black base plate. All components have a similar design with a central locking mechanism visible through a circular cutout on the top.

Application : Insert quarter-turn opening or closing

HP001 Handle pull (Optional)

Technical drawing of the HP001 Handle pull, showing its front view and two cross-sectional views. The handle pull has a rectangular base with a circular cutout and a curved top part. Dimensions: width 28, height 18, thickness 2, base width 17, and a central hole diameter of Ø22.

WP002 Water-proof cap (Optional)

Technical drawing of the WP002 Water-proof cap, showing its front view and two cross-sectional views. It consists of a cylindrical body with a flared base and a central tube. Dimensions: total width 27.8, total height 7, tube diameter Ø28.4, tube thickness 2, base diameter Ø22, base height 15, base width 23, and a central hole diameter of Ø20.

A3001 Stainless steel lock tube (Optional)

Technical drawing of the A3001 Stainless steel lock tube, showing its front view and two cross-sectional views. It is a cylindrical tube with a small circular hole near one end. Dimensions: outer diameter Ø32, inner diameter Ø11, height 25, and a central hole diameter of Ø11.

A3002 Carbon steel seat cover (Optional)

Technical drawing of the A3002 Carbon steel seat cover, showing its front view and two cross-sectional views. It is a circular cover with a flared base. Dimensions: outer diameter Ø66, inner diameter Ø22.5, base height 58, base diameter Ø48, and a central hole diameter of Ø20.1.

Model	Specification
MS816-1E-1	with insert
MS816-1E-2	without insert

Accessories	Electronic lock	Handle lock	Cylinder lock

IP65

Main material and finish : Black pocked coated ZDC housing,handle,insert,zinc-plated steel cam;

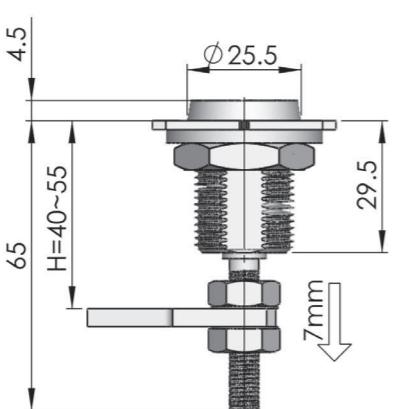

Operation: 120°turn of wing knob causes shaft to pull up of approx. 7mm, Then 80°turn causes cam to rotate to achieve lock opening. Locking status as picture shows

Remarks: Optional key K16

Performance parameter:
Maximum static load: 300N
Recommended nut tightening torque: 20N.m

Toggle and hook	Handles	Door stop	Hinge	Seal gasket

MS816-2

R L IP54

Main material and finish : Blue-gray powder coated ZDC housing and insert, white zinc-plated steel cam, PA handle pull

Application: Cam quarter-turn to open or close, with function of locking

Remarks: Optional key K15 series

Default cam : S1K35Y00002 (Ts=4)

Performance parameter:

Maximum static load: 360N

Recommended nut tightening torque:

20N.m

Maximum input torque: 11N.m

WP001 water-proof cap (Optional)

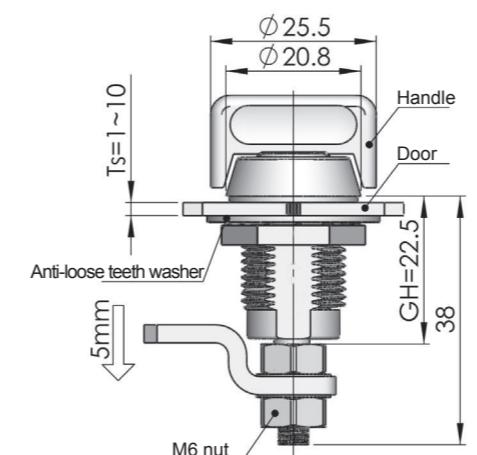

Remarks : Inserts sketch refers to inserts list 2 on P058

R L IP54

Main material and finish : Stainless steel housing, insert and cam, white zinc-plated steel shaft

Application : Quarter-turn opening or closing, with function of locking

Remarks : Optional key K15 series

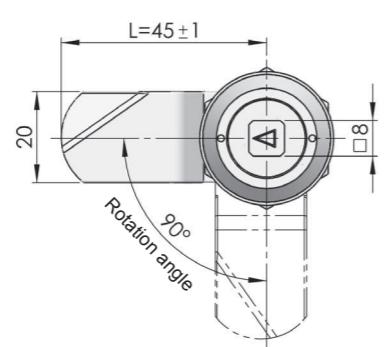

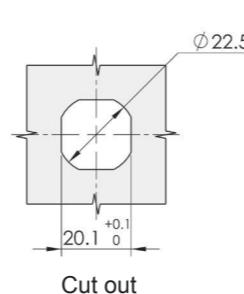

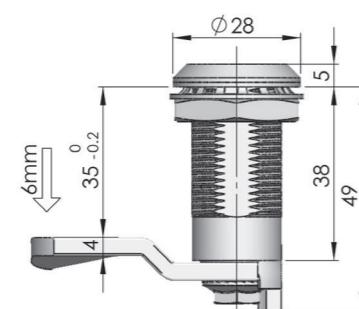

Default cam : S1M44N06001

Performance parameter:

Maximum static load: 590N

Recommended nut tightening torque:
30N.m

Maximum input torque: 11N.m

ERP MS816S00T07009
Remark: Default cam S1M44N06 (cut out Ø10x8)

MS816-4D-4

Main material and finish : Chrome-plated ZDC housing, insert, white zinc-plated steel shaft, stainless steel gear ring, cam and nut

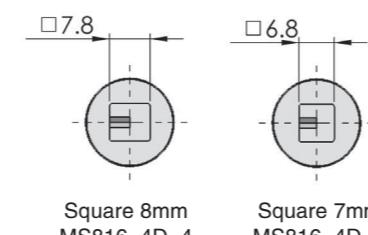

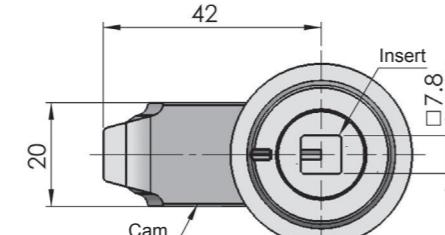

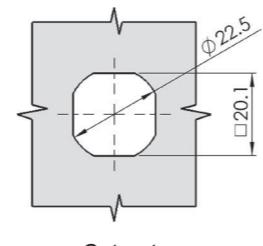

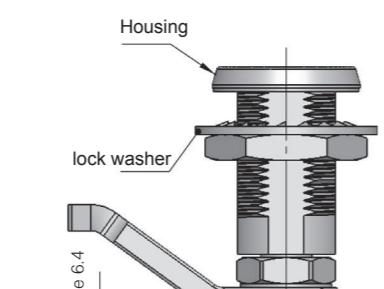

Application: Lock insert aligns with the indicator mark on housing when in lock position. Lock insert twists 195° anti-clockwise when opening. 120° turn of lock insert causes shaft to pull up of 6.4mm. Then 75° turn causes cam to rotate to achieve lock opening.

Performance parameter:

Maximum static load: 300N

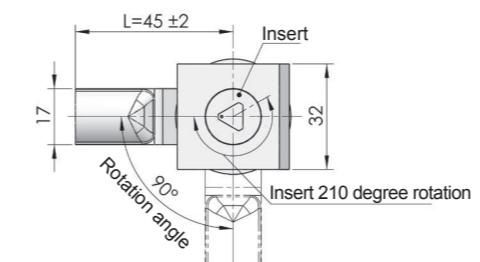

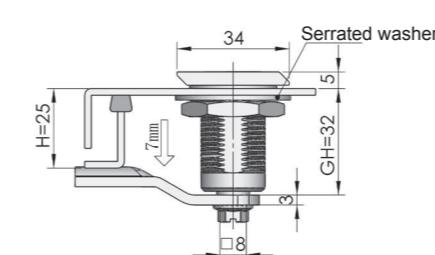

Recommended nut tightening torque:
20N.m

Maximum input torque: 11N.m

MS840-4 Magnetic key

ERP MS840Z1B000006
Remarks: Default cam S1A4500

The technical drawing illustrates a door handle assembly with the following dimensions:

- Total height: 153 mm
- Handle length: L mm
- Width at the base: 40 mm
- Width of the housing base: 20 mm
- Width of the handle base: 35 mm

The internal components labeled in the drawing are:

- Housing**: The main body of the handle.
- Handle**: The grip part of the handle.
- Cam**: A component used for locking or latching.
- Rod latch system**: The mechanism for locking the door.
- Support**: A bracket that supports the rod latch system.
- Rod**: A long thin part that connects the cam and the latch system.

Technical details shown in the top right corner include:

- Diameter of a hole: $\varnothing 6$
- Height of the handle base: 25 mm
- Label GH-
TS=

The image contains two technical drawings of a door lock assembly. The top drawing is a front view showing overall dimensions: total width 68 mm, height 35 mm, and thickness 22 mm. It includes a handle with a diameter of 3.5 mm, a central body with a height of 24 mm, and four mounting holes each with a diameter of 5.2 mm. The bottom drawing is a side view showing a base plate with a height of 15.8 mm, a central body with a height of 25 mm, and a buckle section with a height of 9 mm. A 'Padlock hole' is indicated on the base plate. The handle has a diameter of 7.5 mm. The ERP code is ERP DK617S9D4001.

Front View Dimensions:

- Total width: 68
- Total height: 35
- Handle diameter: 3.5
- Body height: 24
- Mounting holes: 4-Ø 5.2
- Base thickness: 22
- Base thickness at handle: 1.5
- Base height: 22
- Central body height: 24
- Handle height: 35

Side View Dimensions:

- Base plate height: 15.8
- Base plate thickness: 2
- Central body height: 25
- Buckle height: 9
- Handle diameter: Ø 7.5
- Padlock hole

ERP **DK617S9D4001**

Left Hand Side View Dimensions:

- Base plate thickness: 14
- Base plate width: 28.4
- Base plate hole diameter: Ø 6
- Base plate thickness at handle: 6.5
- Base plate thickness at handle: 14.2

Right Hand Side View Dimensions:

- Base plate thickness: 15.9
- Base plate width: 22.5
- Base plate thickness at handle: 13.5
- Base plate thickness at handle: 28
- Base plate thickness at handle: R5
- Base plate thickness at handle: 23.5
- Base plate thickness at handle: 11
- Base plate thickness at handle: 3.5
- Base plate thickness at handle: 2
- Base plate thickness at handle: M6

Technical drawing of a mechanical part showing two views: a front view and a side view.

Front View Dimensions:

- Total height: 28
- Left vertical slot height: 17.5
- Base thickness: 3-Ø6
- Base width: 10.5
- Bottom slot width: 6.5
- Top slot width: 14.2
- Top slot height: 14
- Top circular hole diameter: Ø5.4

Side View Dimensions:

- Total height: 68.5
- Top slot width: 22.5
- Top slot depth: 15.9
- Bottom slot depth: 13.5
- Radius: R5
- Right side thickness: 23.5
- Left side thickness: 11
- Bottom slot width: 2
- Bottom slot depth: 3.5
- M6 screw hole: 2-M6
- Bottom slot height: 28

Right hand	DK618-8-Y	DK618F3D000010

A close-up photograph of a metal door lock mechanism, specifically the DK618-7 model. The lock is a long, thin rectangular component with a central vertical slot and two circular mounting holes. A small metal lever or handle extends from the right side. The surface of the lock shows some texture and wear.

A close-up photograph of a stainless steel door hinge assembly. The hinge is mounted on a light-colored wooden door panel. It features a central vertical plate with two circular mounting holes, and two long, thin arms extending from the sides that are attached to the door frame.

Main material and finish: Steel
Finish: White zinc plated
Item shown on the picture is
DK618-8-Z

The figure contains several technical drawings of mechanical parts:

- Top Left:** A front view of a component with a central slot and two circular features. Dimensions include: total width 38.7, slot width 33.5, slot depth 11, top height 54, bottom height 68.5, left side height 80, left side slot height 22.5, left side slot width 15.85, bottom slot width 13.5, bottom slot depth 28, and a hole diameter of Ø6.4.
- Top Middle:** A side view of a component with a height of 14.2 and a slot width of 3.2.
- Top Right:** Three views of a handle mechanism. The top view shows a handle with a slot width of 6.5, a base width of 30, a base height of 14, a base slot width of 12.8, a base slot depth of 13.5, a base slot side height of 7, a base slot end height of 13, a base slot end width of 1, and a base slot end side height of 5.8. The middle view shows a handle with a slot width of Ø2, a slot depth of 6.5, a slot side height of 1, and a slot end height of 5. The bottom view is a top-down view of the handle mechanism.
- Middle Left:** A top-down view of a handle mechanism with a slot width of 6.6, a slot depth of 13.6, and a slot side height of 21.5. It includes a label "DK619-P".
- Middle Center:** A table showing component specifications:

Specification	Model	ERP
Left hand	DK618-9-Z	DK618F3D0000012
Right hand	DK618-9-Y	DK618F3D0000011
- Middle Right:** A table showing component specifications:

ERP	DK619S4C000001
-----	----------------
- Bottom Left:** A side view of a component with a slot width of 60.3, a slot depth of 23.5, a slot side height of 13, a slot end height of 8.5, a slot end side height of 2.1, a slot end width of 31, a slot end slot width of 31.1, a slot end slot depth of 11.2, a slot end slot side height of 2.1, a slot end slot end height of 16, a slot end slot end side height of 2-Ø4, and a slot end slot end width of 31.
- Bottom Middle:** A front view of a component with a slot width of 58.2, a slot depth of 11.9, a slot side height of 11.2, a slot end height of 9, a slot end side height of 23, a slot end slot width of 31.6, a slot end slot depth of 23, a slot end slot side height of 2-Ø4.1, and a slot end slot end side height of 2-Ø3.3.
- Bottom Right:** Two views of a handle mechanism. The left view is a side view with dimensions: slot width 11.5, slot depth 2.5, slot side height 4, slot end height 9, and slot end slot width Ø1.8. The right view is a front view with dimensions: slot width 26.6, slot depth 8.1, slot side height 4, slot end height 5, slot end slot width 14, slot end slot depth 19.4, and slot end slot side height 7.5. An arrow indicates a rotational movement.

HINGE SERIES

Hinge calculation instructions

Hinge calculation formula :

No. of hinge=n, door width = A; door height = B; door weight = G; hinge installation distance = L

Axial force Fy analysis:

$$F_y = G * 1/n$$

That is, $F_{y1} + F_{y2} + F_{y3} = G$ $F_{y1} = F_{y2} = F_{y3} = G/n$

Radial force Fx analysis:

As pic shows, F_{x2} and center door weight G at the same height position,

This horizontal force is not applied to the center hinge $F = 0$;

So: $F_{x2}=0$

$$W = G * A/2 = L * F_x$$

$$F_x = F_{x1} = F_{x3}$$

$$F_{x1} = F_{x3} = G * A/2 L$$

Remarks: while Selection, every hinge can support bearing door weight; in static conditions, the selection can be based on catalog data;
Above for the theoretical calculation formula;

The image contains three technical drawings of a door handle assembly:

- Side View:** Shows the handle mounted on a frame. Dimensions include a total height of 18.5, a vertical slot width of 12, a vertical slot height of 2, a vertical slot depth of ≥5.5, a horizontal slot width of 8, a horizontal slot depth of 11.4, a handle angle of 105°, and a rounded corner of R5.
- Front View:** Shows the handle from the front. Dimensions include a total width of 15.5, a slot width of 6.5, a slot depth of 20, a handle slot width of 2-R2, and a handle slot depth of 47.
- Cross-Section:** Shows a longitudinal section of the handle. Dimensions include a total length of 32, a shoulder height of 1.5, a shoulder diameter of 2-Ø2, a shoulder angle of 100°, a handle slot width of Ø5.2, a handle slot depth of Ø9, a base thickness of 6, and a base width of 25.

The image contains two technical drawings of a mechanical assembly. The left drawing shows a top-down view of a rectangular base with various features: a central slot labeled 'Positioning screw' with a diameter of Ø 5.2, two side slots each labeled '2 - Ø 6.1', and a central horizontal slot with a width of 50 and a height of 64. Dimensions include 44 (total height), 28 (width of side sections), 7 (width of central slot), 50 (width of central slot), 64 (height of central slot), and 88 (total width). Two M5 screws are indicated at the top edge. The right drawing is a side view showing a vertical frame with a door. The door has a thickness of 9 and a height of 37. The frame has a total width of 19.5 and a height of 3.5. A 120° angle is shown at the bottom-left corner of the frame. A note indicates a gap of >16 between the door and the frame. An M5 screw is shown at the top edge of the frame.

The technical drawing illustrates a door handle assembly with the following dimensions:

- Door:** Total height is 18 mm.
- Frame:** Total height is 16.5 mm, with a gap of 2 mm between the door and the frame.
- Overall width:** 72.7 mm.
- Shaft length:** 40.3 mm.
- Shaft diameter:** Ø 8 mm.
- Shaft support height:** 50 mm.
- Shaft support width:** 70 mm.
- Shaft support thickness:** 13 mm.
- Shaft support hole diameter:** Ø 6.3 mm.
- Shaft support side clearance:** 8 mm.
- Shaft support side distance:** 21 mm.
- Shaft support side height:** 7.5 mm.
- Shaft support side gap:** 2 mm.

CL262F3D001

Technical drawings for door hardware component CL262F3D001. The top left diagram shows a front view of a handle assembly with dimensions: total width 67, handle length 40, and base plate width 60. The top right diagram is a detailed cross-sectional view of the handle mechanism, showing internal parts like a frame, door, and a hinge mechanism with a 120° rotation angle. The bottom right diagram shows the handle installed on a door. A blue bar at the bottom left contains the text "ERP" and the part number "CL262F3D001".

CL263F3D001

Technical drawings for door hardware component CL263F3D001. The top left diagram shows a side view of a cylindrical component with a diameter of 9.5 mm, a shoulder height of 18 mm, a body length of 132 mm, a shoulder width of 34 mm, and a shoulder thickness of 2.5 mm. The top right diagram is a cross-sectional view of a U-shaped bracket with a height of 23 mm and a thickness of 13 mm. The bottom diagram shows a U-shaped bracket with a vertical height of 50 mm, a horizontal distance of 36.5 mm from the center to the top of the U-shape, a horizontal distance of 60 mm between two mounting holes, a horizontal distance of 30 mm between the center of the top hole and the center of the bottom hole, a U-shape height of 40 mm, and a central bolt diameter of 7 mm. A blue bar at the bottom left contains the text "ERP" and the part number "CL263F3D001".

Door Assembly (CL264Z1A001) Dimensions:

CL290S00001

Front View Dimensions:

- Left vertical height: 32
- Left horizontal distance from center: 15.5
- Right vertical height: 7
- Right horizontal distance from center: 26.2
- Top horizontal distance from center: 33.7
- Top vertical height: R14.5
- Bottom gap: 3.5
- Bottom angle radius: R14.5
- Bottom hole diameter: 2-Ø4.3
- Bottom horizontal distance from center: 6.5

Side View Dimensions:

- Top horizontal distance from center: 17.5
- Top vertical height: 12.8
- Bottom vertical height: 10
- Bottom horizontal distance from center: 17.5
- Bottom gap: 3.5
- Bottom angle radius: R14.5
- Bottom hole diameter: 2-M3

3D Assembly View: Shows the front panel with the hinge and mounting hardware.

ERP

CL292Z3H001

The image contains four technical drawings and two assembly diagrams for door hinge components.

Top Left: A side view of a hinge component showing a shaft extending from the top. Dimensions include 116 mm for the total length, 50 mm for the base width, and 68 mm for the total width. Two holes of diameter $\phi 8.1$ are located at the bottom. A clip is shown at the top right.

Top Right: A front view of a hinge frame. The frame has a height of 47 mm and a thickness of 10 mm. It is mounted on a door with a thickness of 37 mm. The hinge is labeled "Frame" and "Door". A circular arrow indicates a rotation of 120°.

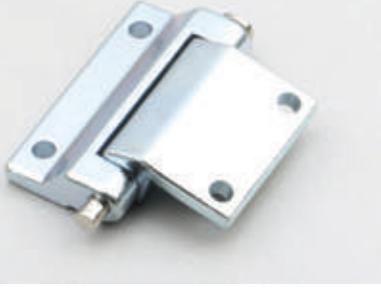

Middle Left: A top-down view of the hinge showing its profile. The overall width is 100 mm, and the central part has a width of 70 mm. Two holes of diameter $\phi 8.1$ are located on the outer edges.

Middle Right: An assembly diagram showing the hinge frame attached to a door panel. The hinge is shown from a perspective angle, illustrating its installation.

Bottom Left: A detailed view of a cylindrical part with a diameter of $\phi 12$. It has a height of 30 mm and a shoulder height of 40 mm. Two M8 screws are used for mounting, with a distance of 60 mm between them.

Bottom Right: A front view of the hinge frame with various dimensions: height 44 mm, base width 32 mm, base thickness 6 mm, and a slot width of 15 mm. The door thickness is indicated as >10 mm. A circular arrow indicates a rotation of 120°.

CL293

 main material and finish: Sand-spraying and nickle-plated casting steel hinge
application: Opening angle 120°

performance parameter:
maximum static load
radial load: 3000N
axial load: 3000N

Sample Tips

The performance and application specification of our products are only for reference. If the application conditions of the chosen products and the matching products can not be confirmed, then they should be tested under the practical situation and environment. Thereby it can be confirmed whether the products are suitable for the users and whether they satisfy the users in the application. The application conditions will be changed in different applicable occasions and by different installed methods, so the sample only introduces the products' general performance and application. The standard size is only for the users to confirm the products' external size and provide them proper installed methods. Any mistake or drawback of those data in practical application, we highly welcome your feedback information.

Order of regular standard items will be handled and dispatched faster than those of irregulars and nonstandard ones.

All of your cabinet locks, hinges, door stops and other regular products are RH application. Drawings of this catalog may not share single unified scale.
